Executive Summary

Site: www.theshowcompany.in · **Report date:** July 26, 2026 · **Data window:** April 27 – July 26, 2026 (last 3 months)

The Show Company's website is five months old (domain registered February 22, 2026) and is at the expected stage for its age: indexed, technically sound, ranking #2 for its own brand name, and invisible for commercial keywords. Total search performance: **52 clicks from 773 impressions** (avg. position 5.98). Total site traffic: **85 users, 199 pageviews, 4 leads generated**.

The standout finding: **ChatGPT sends nearly 3x more traffic than Google** (38 sessions vs. 13). The site's AI-crawler-friendly configuration is already paying off, and AI assistants are currently the strongest acquisition channel after direct visits.

The single biggest limitation is that the site is one page. It cannot rank for the commercial queries that drive bookings ("book comedian for corporate event", "college fest artists") because no page targets them. Google has briefly tested the homepage at position 1 for queries like "india stand up comedian" — a strong signal that content build-out will convert quickly.

Bottom line: foundation is solid, brand is winning, AI channel is a genuine head start. The next phase is content: service pages, artist pages, and a Google Business Profile.

1. Site & Technical Health

Check	Status	Detail
Availability	✅ Pass	HTTP 200, HTTPS enforced
Indexed by Google	✅ Pass	Homepage indexed, receiving impressions since late April
robots.txt	✅ Pass	Valid; explicitly allows GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot, Google-Extended
XML sitemap	⚠️ Minimal	Present and valid, but contains only 1 URL (the homepage)
Title tag	✅ Pass	"The Show Company Stand-Up Comedy, College & Corporate Events"
Meta description	✅ Pass	Well-written, includes services + "across India" + call to action
Open Graph tags	✅ Pass	Full set: og:type, og:site_name, og:locale (en_IN), og:image (1200×630)
Structured data	✅ Pass	4 JSON-LD blocks on the homepage
Domain age	⚠️ New	Registered Feb 22, 2026 — 5 months old, still building trust with Google
Page count	❌ Weak	Single-page site; anchors (#about, #events, #shows, #faqs) are not separately rankable

Technical verdict: clean bill of health for what exists. The weakness is not quality, it is quantity — one page, one sitemap entry, one shot at ranking.

2. Google Search Performance (Search Console)

Last 3 months: 52 clicks · 773 impressions · 6.73% CTR · average position 5.98

2.1 Brand queries — where all the clicks come from

Query	Clicks	Impressions	CTR	Avg. position
the show company	36	85	42.4%	2.2
theshowcompany	3	8	37.5%	7.6

Position 2.2 with a 42% CTR for the brand name is healthy. The result above is the US name-sake theshowcompany.com; expect to overtake it for Indian searchers as domain authority grows.

2.2 High-impression, zero-click queries

Query	Impressions	Avg. position
show company	147	4.4
show companies	32	3.4
shows company	16	4.1
company show	14	8.1
the show events	8	7.8

These are generic/ambiguous queries where most searchers want something else. Low priority — not worth chasing.

2.3 The important signal: Google is testing commercial queries

Each of these appeared exactly once at **position 1**:

- india stand up comedian

- stand up comedians india
- standup comedian
- comedy production companies
- show production company
- stand up company

A single impression at position 1 typically means Google briefly trialed the page for that query. Google understands what the business does; it lacks dedicated content and authority to show the site consistently. **There is currently zero sustained visibility for any booking-intent keyword.**

2.4 Geography & devices

- **India: 699 of 773 impressions and all 52 clicks** (avg. position 4.7 in India vs. 47 in Singapore — namesake collision noise abroad).
 - Mobile: 556 impressions, 27 clicks (4.9% CTR) · Desktop: 214 impressions, 24 clicks (11.2% CTR).
-

3. Website Analytics (GA4)

April 27 – July 25: 85 users · 199 pageviews · 4 leads

3.1 Acquisition — the ChatGPT surprise

New users by channel:

Channel	New users	Share
Direct	41	48%
AI Assistant	30	35%
Organic Search	11	13%
Organic Social	3	4%

Sessions by source: **chatgpt.com 38 · google 13 · Instagram 2 · Bing 1 · Facebook 1.**

ChatGPT referrals outnumber Google organic almost 3-to-1. The robots.txt decision to welcome AI crawlers is the site's most successful SEO move to date. This channel deserves deliberate investment (see Action Plan).

3.2 Conversion

- 4 `generate_lead` events from 5 form starts — a ~4.7% visitor-to-lead rate, solid for a new site.
- ⚠️ GA4's "Qualified leads" and "Converted leads" report as 0 because `generate_lead` is not yet marked as a **key event** in GA4 Admin. Two-minute fix; without it, lead funnels can't be measured.

3.3 Engagement

- Average engagement time per session: ~10–19 seconds.
- Only 35 scroll events across 199 pageviews.

Visitors land, glance, and leave. A single long page gives them nothing to click into — this hurts both conversion and the engagement signals Google uses.

3.4 Audience geography

Market	Active users	Note
India	55	Real audience: Mumbai (9), Dehradun (6), Delhi (5), Bengaluru (4), Jaipur (3)
United States	15	Largely bot/datacenter traffic (Council Bluffs IA, Glenview IL)
China	5	Bot traffic (Xiamen, Shanghai)

Weekly new users are trending gently upward: 15 → 16 → 7 → 17 → 11 → 19 over the last six weeks.

4. Competitive Position

For booking-intent searches, the sites that own the results are established marketplaces and agencies: **StarClinch, BookEventz, The Gigs, Engage4more, SOS Party, Alive Experiences**. They win with thousands of indexed pages (per-artist pages, per-city pages, per-occasion pages) and years of domain authority.

The brand name “The Show Company” is globally contested by unrelated namesakes in Calgary, Las Vegas, and Singapore (theshowcompany.com). For Indian queries this fades with authority, but content should consistently pair the brand with India-specific context.

5. Action Plan

Immediate (this week, < 1 hour total)

1. Mark `generate_lead` as a key event in GA4 (Admin → Events). Unlocks lead-funnel reporting.
2. Submit `sitemap.xml` in Search Console (Indexing → Sitemaps) if not already submitted.
3. Review the unused verification token flagged in Search Console (Settings → Users) and remove it if unrecognized.

High priority (next 2–4 weeks)

4. **Create a Google Business Profile** — captures brand searches with a knowledge panel, pushes the US namesake down, and opens the local-pack channel (“event company in Mumbai/Delhi”).
5. **Build service pages** — one page per query cluster:
 - Book Stand-Up Comedians for Corporate Events
 - College Fest Artist Booking
 - Auditorium & Live Show Production
 - Corporate Event Entertainment Each needs unique content (500+ words), its own title/description, FAQ content, and a booking CTA. This is the single highest-leverage SEO investment available.
6. Add an `llms.txt` and keep FAQ-style, citable content on-page to compound the AI-assistant channel.

Medium priority (1–3 months)

7. **Artist/roster pages** — the page type competitors rank with; also gives AI assistants concrete names to cite.
8. **City relevance** — reflect Mumbai, Delhi, Bengaluru, Jaipur in content (analytics show these are the real audience). Avoid mass-generated location pages.
9. **First backlinks** — listings on JustDial, Sulekha, and event-industry directories; local press for shows produced.
10. **Expand sitemap** as new pages ship, and request indexing for each in Search Console.

Measurement cadence

Re-export Search Console queries monthly. Success markers for the next 90 days: any commercial query with 10+ impressions; brand position ≤ 1.5 ; 3+ pages receiving impressions; ChatGPT referrals holding or growing alongside rising Google organic.

Appendix: Data Sources

- Google Search Console export, property `sc-domain:theshowcompany.in`, last 3 months (exported July 26, 2026)
- GA4 exports “Generate leads overview” and “Web traffic overview”, April 27 – July 25, 2026
- Live technical crawl of www.theshowcompany.in (robots.txt, sitemap.xml, homepage markup), July 26, 2026
- WHOIS registry data (NIXI), July 26, 2026

Prepared with Claude Code. Third-party rank-tracking (DataForSEO) was unavailable at report time; all ranking figures come directly from Google Search Console, which is the authoritative source.
